

1. Title of the Project

Clear, concise, and descriptive

(Example: “AI-Based Wildlife Intrusion Detection System”)

2. Student Details

Name:

Reg. No:

Program name & Semester:

3. Introduction (Approx. 150–200 words)

Briefly explain:

Background of the problem

Importance of the topic

Context in which the project is being developed

4. Problem Statement (Keep it precise – 1 paragraph)

Clearly define the problem you are addressing

Mention gaps in existing systems (if any)

5. Objectives

List 1-2 clear objectives:

To design...

To develop...

To analyze...

To implement...

6. Scope of the Project

What the project will cover

What it will NOT cover (limitations)

Target users or application domain

7. Methodology / Proposed System (Keep it simple and structured)

Explain:

Dataset details (Source and size)

Approach/technique used

Architecture or workflow (diagram if needed)

8. Expected Outcomes

What results are expected

Deliverables (software, model, report, prototype, etc.)

9. Hardware & Software Requirements

Hardware:

System configuration (RAM, Processor, etc.)

Software:

Programming languages

Tools/Frameworks

Database (if any)

10. References

Books, journals, websites

(Use simple format like APA/IEEE if required)
